PostureLens — privacy

Kurzfassung (Deutsch)

PostureLens nutzt nur den Bewegungssensor (IMU) der Brille, hat keinen Netzwerk-Code und speichert keinen Verlauf deiner Haltung. Gespeichert sind nur die kalibrierte Ausgangslage und deine Einstellungen. Kein Mikrofon, keine Kamera, kein Standort, kein Tracking. Deinstallieren löscht alles.

Short version

PostureLens has no network code, and it keeps no history of how you sat.

What is stored

Data	Where	Leaves the device
Your calibrated upright direction	Even app per-app storage, on the phone	No
Thresholds and display settings	same	No

Written through `setLocalStorage()` under the single key `quietglass.posturelens.v1`.

What is deliberately not stored

The tally of time spent upright versus leaning exists **in memory only**, for the current session. Closing the app discards it.

This is a design decision, not an omission. Posture over time is health-adjacent data. There is no file recording how you sat today, so there is nothing to leak, subpoena, or sell.

What is not collected

- No analytics, telemetry, crash reporting or usage statistics.
- No account, login or device identifier.
- No advertising or third-party SDKs.

Sensors

PostureLens uses the **IMU** (head motion) only. It does **not** use the microphone, the camera or your location, and `app.json` requests no permissions for them.

IMU samples are processed in memory and never written to storage — only the single calibrated reference direction is saved.

The **sensor test** (0.5.0, "More" tab or hold on the glasses) can record 20 s of raw samples when you press "Record 20 s". The recording stays in the page's memory; it leaves the

phone only if you download or copy the CSV yourself, and it is gone when the test ends or the app closes.

Removing your data

Uninstalling removes the per-app storage, and with it the calibration and settings. "Clear calibration" in the phone companion removes the reference without uninstalling.

Third-party code

One runtime dependency: `@evenrealities/even_hub_sdk`, the official SDK. Build-time tools (Vite, TypeScript, Vitest) ship no code into the bundle.

Terms

PostureLens is provided free of charge and as is, without warranty. It is not a medical device and gives no medical advice. Developer: Alfred Aigner.
